and addressing concerns can all foster a culture of open communication between jobsite employees and leaders,

applications streamlines communication processes, enables real-time updates, and simplifies task management.

For example, artificial intelligence can help monitor employees' health, safety, and progress onsite, and it can expedite any paperwork or reporting more accurately, facilitating the process for offsite executives and back-office employees. Building Information Modeling (BIM) and reality capture can aid the design and build process for workers both on and offsite, bringing data and design to life for a more accurate build and more accurate and efficient monitoring of the building pQ
